HT = Herbicide Tolerant

IR = Insect Resistant.

IR / HT = Insect Resistant / Herbicide Tolerant

HT / SCN = Herbicide Tolerant / Soybean Cyst Nematode resistant

Notes:

¹"Clearfield" herbicide resistance is bred into seed via traditional breeding and hybridization techniques and is therefore not a genetically engineered trait; however, it has appeared on GE Seed Reporting Forms submitted to the Agency of Agriculture, Food & Markets, and is included here as a result.

* Breakdown of corn traits is not available for 2002.

** Assumes a seeding rate of 20 lb/ac for corn , 50 lb/ac for soybeans, and 15 lb/ac for alfalfa. Calculated acres are derived from percentages, which are rounded.

† Acreage planted data obtained from the National Agricultural Statistics Service (NASS) - <http://www.nass.usda.gov>

†† The amount of GE soybean planted in VT as a percentage of the total is unknown, but is estimated to be in the 85 to 95% range

*** No GE alfalfa was planted in 2007, 2008, 2009, or 2010 due to the May 3, 2007 Federal injunction prohibiting sale and planting of Roundup Ready alfalfa after that date.
