WEBINAR INFORMATION	
Webinar Title: Nutrient Flows: Nitrogen Sources, Cycling, and on your Farm (NMP Lesson 3)	
<u>Course Description:</u> This recorded webinar presented by UVM Extension Northwest Crops and Soils Program presents an overview of the Nitrogen cycle and how it can influence crop yields, nutrient management, farm practices and management decisions.	
Please submit this completed form to <u>AGR.Waterquality@vermont.gov</u> for water quality credits.	
Link to Recorded Webinar: https://youtu.be/_zshRBtqyuk

WEBINAR QUESTION FOR WATER QUALITY EDUCATIONAL CREDITS

What v	was the most interesting thing you learned?
	A) Unlike phosphorus, nitrogen does not bind readily to other nutrients, can easily move through the soil with water (leaching), and can be lost to the atmosphere as a gas (volatilization). Nitrogen can also be lost through surface water and erosion. This means that nitrogen is a nutrient that can easily be depleted from a field.
	B) Organic matter on farms in Vermont generally comes from manure and plant residue. Organic matter is a source of nitrogen for plants. Microbes are essential for organic matter nitrogen availability to plants. They break down the organic matter and release the nitrogen for plant uptake.
	C) If the soil is too cold, the microbes will not breakdown (mineralize) organic matter, releasing nitrogen. This is why crops can look yellow early in the season when it is cool. This also means that microbes will not break down manure in cooler temperature and it is better to apply manure when it is warmer so microbes can break it down more quickly.
	D) Nitrogen can also get tied up (immobilized) by microbes and made unavailable to the crop if there is too much carbon in the manure (e.g. sawdust, straw-based bedded packs, etc.). These carbon-heavy manure sources are better applied in the fall so they have time to decompose over the winter.
	E) The three main on-farm sources of nitrogen are manure, legumes, cover crops, and sod (rotating from hay into corn).
	F) Other (please type or write):
I certif	y by signing* my name here, that I watched the recorded webinar.
